

Battle of the best

PARTICIPANT TECHNICAL REFERENCE

AI Technical Guide for Participants

AI Friday National Finals - Season 2

29 August - 4 September 2026

TCS Internal

Participant reference for approved AI tools, model selection, installation, configuration and basic usage during the hackathon.

Use the tools and credentials provided by the organizers.

Choose tools based on the task: application generation, coding, analysis, retrieval, multimodal work, or reasoning.

Keep the team in control of architecture and implementation decisions; AI tools are accelerators, not substitutes for engineering judgement.

Models Available

The following models are listed in the supplied hackathon tools guide. Select a model according to the capability indicated by its classification.

S. No.	Model	Classification	Typical fit during the hackathon
01	GPT-3.5 Turbo	General model	General-purpose prompting, drafting and application support
02	Gemini 3.1 Pro	Multimodal	Tasks involving text plus images or other modalities
03	GPT-4o Mini	Multimodal	Tasks involving text plus images or other modalities
04	text-embedding-3-large	RAG model	Embedding and retrieval workflows
05	Whisper	Audio model	Audio transcription or audio-related workflows
06	Llama 3.2 90B Vision Instruct	Multimodal	Tasks involving text plus images or other modalities
07	Llama 3.3 70B Instruct	General model	General-purpose prompting, drafting and application support
08	Llama 4 Maverick	Multimodal	Tasks involving text plus images or other modalities
09	GPT-4o	Multimodal	Tasks involving text plus images or other modalities
10	Phi-4-reasoning	Reasoning model	Complex analysis, planning and problem solving
11	GPT-4.1 Mini	General model	General-purpose prompting, drafting and application support
12	GPT-4.1 Nano	General model	General-purpose prompting, drafting and application support
13	DeepSeek-R1	Reasoning model	Complex analysis, planning and problem solving
14	GPT-4.1	General model	General-purpose prompting, drafting and application support
15	GPT-5 Mini	Reasoning model	Complex analysis, planning and problem solving
16	DeepSeek-V3	General model	General-purpose prompting, drafting and application support

Models Available

Continuation of the approved model list.

S. No.	Model	Classification	Typical fit during the hackathon
17	Gemini 2.5 Flash	Multimodal	Tasks involving text plus images or other modalities
18	Gemini 2.5 Pro	Multimodal	Tasks involving text plus images or other modalities
19	Gemini 2.5 Flash-Lite	Multimodal	Tasks involving text plus images or other modalities
20	Gemini 3 Flash	Multimodal	Tasks involving text plus images or other modalities
21	GPT-5	Reasoning model	Complex analysis, planning and problem solving
22	GPT-5.1	Reasoning model	Complex analysis, planning and problem solving
23	GPT-5.4	Reasoning model	Complex analysis, planning and problem solving
24	GPT-5.4 Nano	Reasoning model	Complex analysis, planning and problem solving
25	GPT-5.4 Mini	Reasoning model	Complex analysis, planning and problem solving
26	GPT-5.2	Reasoning model	Complex analysis, planning and problem solving
27	GPT-5.2 Codex	Coding model	Code generation, modification and review
28	GPT-5.3 Codex	Coding model	Code generation, modification and review
29	GPT Realtime	Whisper Audio model	Audio transcription or realtime audio workflows
30	Claude Sonnet 4.6	General model	General-purpose prompting, drafting and application support
31	Claude Haiku 4.5	General model	General-purpose prompting, drafting and application support
32	Claude Opus 4.6	Reasoning model	Complex analysis, planning and problem solving

Participant Setup & Tool Guide

This section preserves the installation, configuration and basic usage instructions from the supplied tools guide, reframed as a participant reference.

Dyad

SETUP

Available as an installer (.exe) in the Shared Drive. Copy the installer to your local machine and complete the installation.

USE IT FOR

Use natural-language prompts to generate applications, UI screens, and prototypes. Best for rapid MVP development and front-end generation.

Kilo Code

SETUP

Install

Install Kilo Code from VS Code Marketplace.

Configure LiteLLM

Settings > Kilo Code > Model Provider

Select LiteLLM

Endpoint: <https://genailab.tcs.in>

Enter organizer-provided credentials/API details.

USE IT FOR

Feature development, debugging, refactoring, and code understanding.

Codex CLI

INSTALL

```
npm install -g @openai/codex
```

CONFIGURE LITELLM

Endpoint: <https://genailab.tcs.in>

Enter organizer-provided credentials/API key.

Verify connectivity before use.

USE IT FOR

Code generation, code modification, code review, and terminal-based development workflows.

Use organizer-provided access details and approved endpoints exactly as shared.

Participant Setup & Tool Guide

Gemini CLI

INSTALL

```
npm install -g @google/gemini-cli
```

CONFIGURE LITELLM

Endpoint: <https://genailab.tcs.in>

Use organizer-provided credentials/API key.

Validate configuration before use.

USE IT FOR

Project analysis, code generation, troubleshooting, and automation workflows.

AnythingLLM

SETUP

Available as an installer (.exe) in the Shared Drive. Copy the installer locally and complete the installation. Connect to the provided AI endpoint if required.

USE IT FOR

Upload requirement documents, PDFs, architecture documents, and project knowledge for AI-assisted retrieval and questioning.

AI Genie

SETUP

Available in the Shared Drive. Copy the application to your local machine and launch it. Follow the setup and access instructions available in the accompanying PDF.

USE IT FOR

Ideation, content creation, user stories, documentation, and general AI assistance.

AI-assisted retrieval is supported through AnythingLLM for requirement documents, PDFs, architecture documents and project knowledge. AI Genie supports ideation, stories, documentation and general AI assistance.

Quick Participant Reference

Use the following mapping to select a primary tool from the supplied guide based on the immediate participant need.

Participant need	Primary tool in the supplied guide
Rapid application / UI generation	Dyad
IDE-based feature development and code support	Kilo Code
Terminal-based code generation and review	Codex CLI
Terminal-based analysis, generation and automation	Gemini CLI
Knowledge retrieval and questioning over project documents	AnythingLLM
Ideation, stories and documentation support	AI Genie

CHOOSE BY TASK

Generation

Application/UI generation, coding, analysis, retrieval, multimodal work, reasoning and documentation are the primary task categories surfaced in the guide.

KEEP CONTROL

Engineering judgement

AI tools accelerate the work, while architecture and implementation decisions remain with the team.

ACCESS

Approved credentials

Use the credentials, endpoints and shared installers provided by the organizers.

KNOWLEDGE

Project context

AnythingLLM can be used for AI-assisted retrieval and questioning over project documents and related knowledge.
